Intelligent Lockers

AssetTracer's unique locker solution design allows you to optimize space and investment by providing the ability to manage and track the largest array of assets inside a single system. Every aspect of the system's SmartTerminal and RTNHub management software is designed to help get immediate gains in operational efficiency, productivity and maximize ROI.

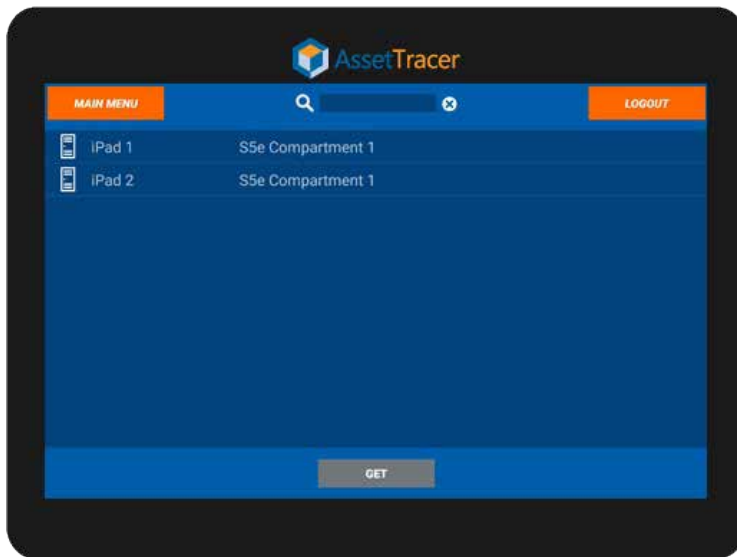

AssetTracer offers the widest range of compartment sizes and options, including different types of modules, a variety of door types, ventilation patterns, paint colors, authentication methods, charging options and integrations. Mix & match different compartment sizes to custom build your locker.

- Easily secure, track and manage your assets
- Eliminate time consuming record-keeping thanks to built-in smart management technology.
- Gain insight on how your equipment is being used with powerful content surveillance tools
- Easily manage unattended asset deposits

Choose Your Configuration

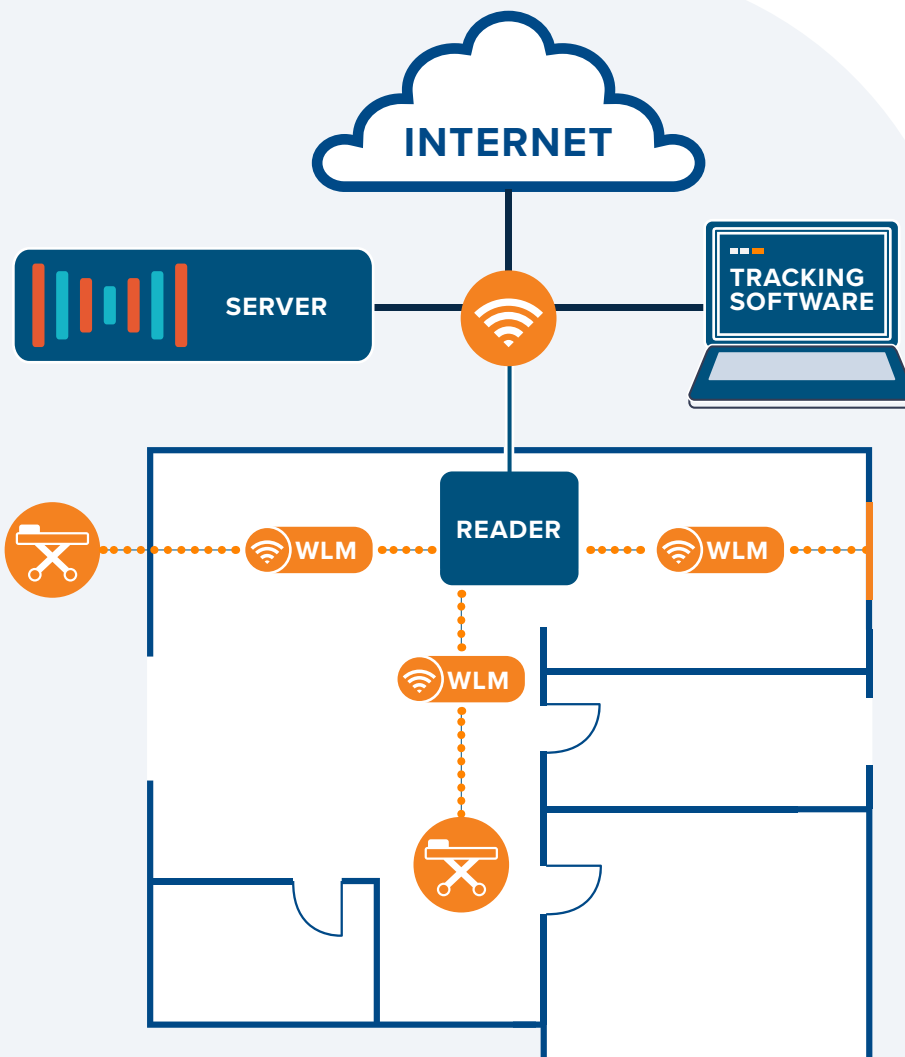

Combine different locker compartments with your choice of authentication methods on a SmartTerminal access panel. Configurations available for many different applications, including:

- Laptop/Mobile Device Management & Storage
- Evidence Storage & Transaction Logging
- Police Equipment Storage
- Warehouse Mobile Device Tracking & Locating
- EMS Kit Storage & Tracking

Asset Tracking

Locate high-value equipment quickly and easily. Ensure your organization always has full oversight and control of its mission-critical assets. Reduce losses and enable faster incident response 24/7.

AssetTracer KEY BENEFITS

- Asset Management**
 Get full “cradle to grave” control over who accesses your assets and insight into how they’re used.
- Secure Storage**
 Restrict access to assets exactly as you need. By individual personnel or group, by asset, and only at the times you specify.
- Process Control**
 Gain tighter control over your business, security, and IT activities with advanced management tools. Get them closer in sync to drive your organization to whole new levels of performance.
- Automation**
 Free up staff time spent on tedious asset management and compliance work with automated smart storage solutions. Let those staff focus on more profit generating tasks

RFID Key Control Cabinets

Complete key management in a smart, expandable, and modular solution that lasts. Prevent unauthorized access and ensure complete accountability of your keys with an automatically collected transaction log of every key transaction. The system ensures that users can only access keys that are assigned to them, locking all other keys in place during transactions.

KeyTracer's RFID key fob technology makes it the most reliable, advanced key management system on the market today, with the lowest total cost of ownership over the system's lifetime compared to alternative solutions.

KeyTracer systems were designed from top to bottom with low Total Cost of Ownership and customer value in mind:

- RFID technology is contactless and requires no maintenance or cleaning for the system to work with 100% accuracy.
- Lifetime guarantee on key fobs
- There is no system end of life – KeyTracer's patented design allows to easily replace virtually any system component.
- The system's modular design allows for additional panels to be added to existing cabinets for future expansion.

You get to track and control who can access keys, where they are taken, and when. Powerful management features including real-time reporting and alerts on late keys, configuration, and management options to control key access, and the ability to integrate with existing access control systems.

Fleet Management

The KeyTracer Fleet Key Management System generates valuable business insights while it simplifies running your fleet. Automate, track, and control how vehicle keys are distributed to maximize your fleet's performance. You get powerful, automated controls over vehicle scheduling and sign outs, and on-the-ground insight into fleet utilization so you can optimize how your vehicles are used. KeyTracer Fleet Management is highly configurable, and suitable for small corporate fleets and large transportation agencies alike. It easily integrates with a range of other leading security and business operations platforms and our own RTNHub management platform.

KeyTracer Key Benefits

- **Complete Key Management**

Automated key management powers your security and business operations. Reduce risk and key losses. Turn your bare metal keys into smart keys that generate valuable, actionable business intelligence.

- **Automation**

Free up staff spent on tedious asset management and compliance work with automated key management. Let those staff focus on more profit-generating tasks

Key Location Solutions

Quickly locate lost or missing keys. Receive real-time information on who has which keys inside your facility. Get instant insight on how long those personnel have had keys in their possession and where they have been taken. Prevent key theft and security breaches. Deploy multiple, customized security zones for automated tracking and receive instant SMS alerts when keys are taken outside your designated perimeters.

Key Exit Alarm Systems

Automatically identify mission-critical key rings as they approach exit points and send notifications to appropriate staff. Maintain total control over sensitive or regulated keys in your facility, anytime, anywhere.

Evacuation Management & Automated Roll Call Solution

Keep your people safe during evacuations, streamline emergency mustering, and make evacuation drilling more efficient. The PeopleTracer Evacuation Management & Automated Roll Call Solution can be the cornerstone of your emergency response plan. It provides life-saving, real-time location information on missing personnel. It automatically identifies each individual and logs them safe as they approach designated muster points.

Emergency managers get a clear, accurate status report on evacuation progress. It also lets you take efficient action on personnel still at risk. You can give first responders precise and up-to-the second locational intelligence on personnel still in your facilities or unaccounted for.

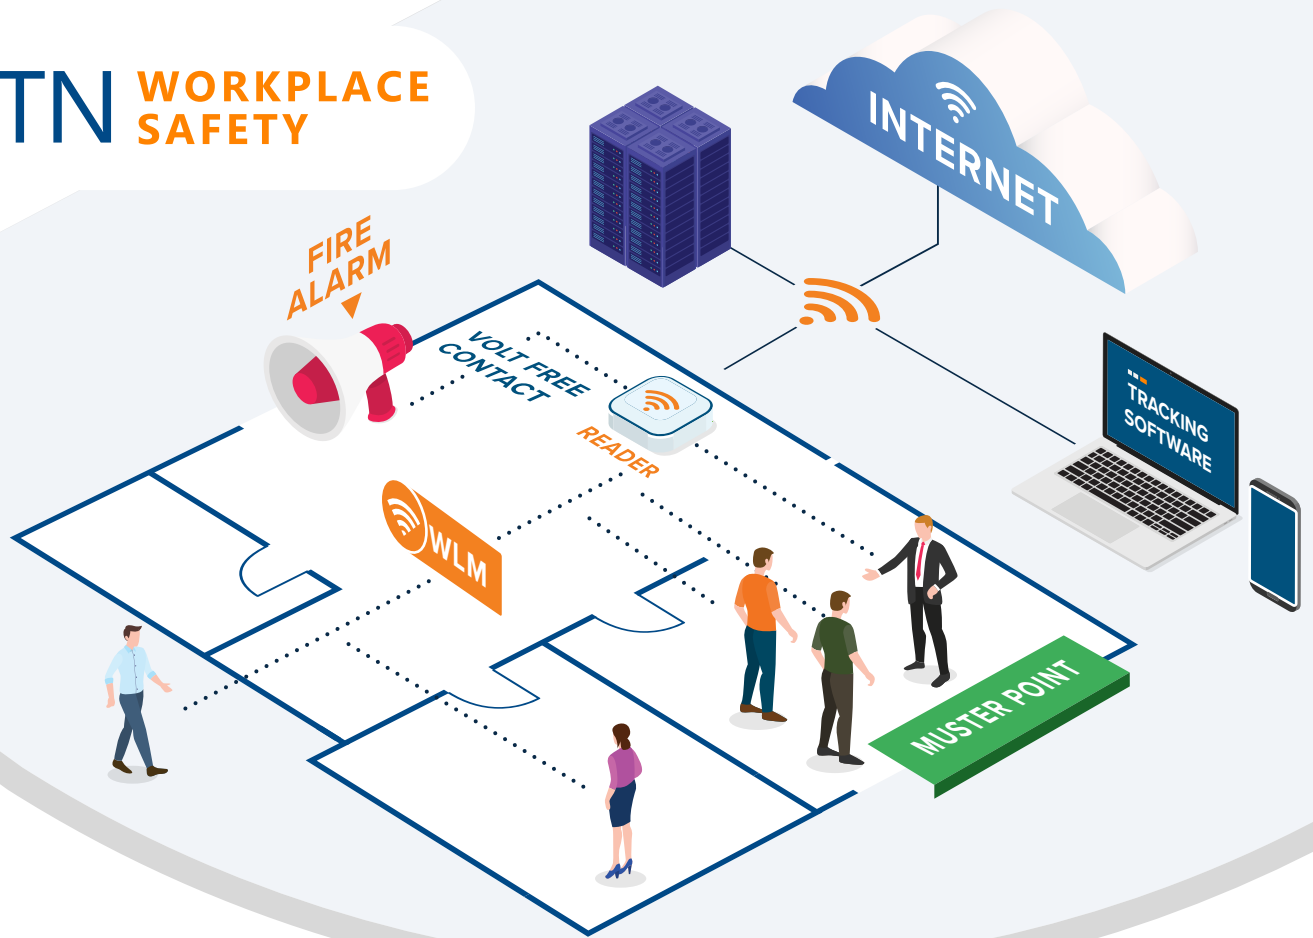

Lone Worker Safety Tracking

The Lone Worker Safety Tracking system protects employees working alone or in hazardous environments. PeopleTracer badges individually identify employees and signal their location every three seconds. Installed scanners monitor each badge in a given location. The PeopleTracer system notifies supervisors as a precaution when they detect a single person is left alone. Badges are also equipped with a duress button and fall sensors. They let workers raise a remote alarm whenever they need assistance.

SAFETY

SECURE VISITOR MANAGEMENT

Track your visitors, staff, and contractors throughout your facility quickly, efficiently, and safely with the PeopleTracer Secure Visitor Management System. The system is an excellent tool for improving compliance with local health and safety regulations and to enforce your corporate security policies.

No manual intervention or handling is required by users. The system can pair staff with visitors and send alerts if they are ever separated. You can also assign access rights to certain locations within your facility, either to individual workers or staff/visitor pairs. If users ever try to enter a restricted area a supervisor or security personnel can receive real-time alerts with their exact location.

GUARD TOUR SOLUTION

Keep security personnel safe and accountable by automatically tracking guard tours in real time with the PeopleTracer Guard Tour System. Automatically monitor, record, and timestamp a guard's tour without them needing to log progress at checkpoints. No swiping, clocking, or other action required.

You get actionable business intelligence on security tours in your facilities. Location data is collected and managed through the easy-to-use RTNHub web application which provides comprehensive reports and real-time alerts for important events, such as when a guard fails to reach a checkpoint.

Health & Temperature Screening Solution

Protect your workplace with a complete set of No-Touch health screening features on a single, automated and easy-to-use kiosk solution. Manage health and safety protocols for employees, contractors and visitors efficiently

- Health Questionnaire
- Temperature Screening & Mask Detection
- Automated label printing of screening results
- Facial and Palm Recognition
- Access Control System Integration
- Visitor Management with QR Codes
- Sensitive Data Protection
- Easy to Install and Manage

Key Benefits

Risk Management

Be ready when emergencies strike. Ensure better business continuity and comply with the latest organizational safety and risk prevention standards.

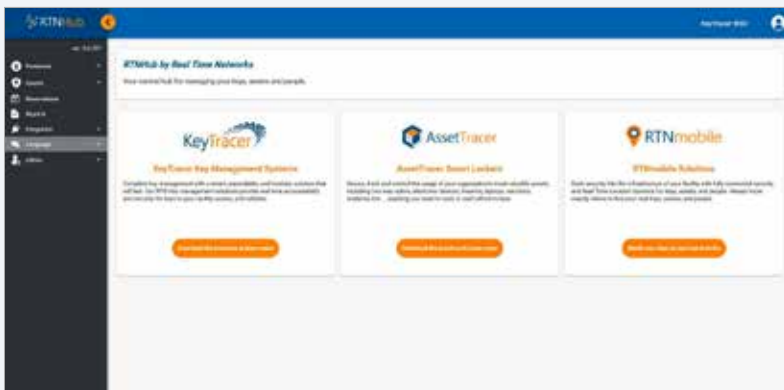

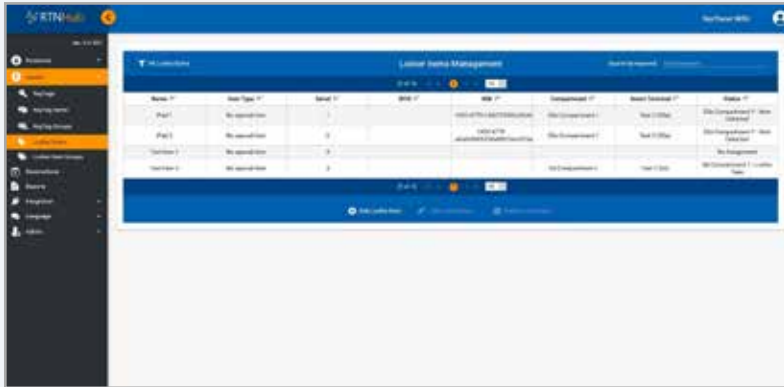

Process Control

Unify your business, security, and IT processes to drive your organization to whole new levels of performance.

Automation

Free up staff time spent on compliance work with an automated tracking, reporting and alert solutions. Let those staff focus on more profit-generating tasks

Unified Management with Real Time Networks

The RTNHub web dashboard lets you manage Real Time Networks' entire portfolio of solutions in one easy-to-use web dashboard. It integrates and streamlines critical information from KeyTracer key control systems, AssetTracer intelligent lockers, and PeopleTracer employee safety solutions. You can combine these systems to develop workflows not previously possible. RTNHub provides real-time alerts so you can take immediate action when required. Mitigate any security risks as they happen and address future concerns before they escalate.

A simple and intuitive interface lets you control everything about your security environment. User information from all connected systems is synchronized to make deployment faster and maintenance easier. Generate customized reports. Remotely unlock doors and release assets during emergencies.

RTNHub integrates with a range of the most popular third-party security and IT systems. It is scalable

Security Integrations

RTNHub is easy to integrate with many of the world's leading security and management systems. Connect users across your KeyTracer, AssetTracer, PeopleTracer and third party systems for more effective and efficient management, without any added administration burden. Real Time Networks puts total control right where you need it, giving your keys and assets the potential to help drive your most critical processes.

Integrations Benefits

- Reduced administration
- Maximized insight
- Optimized processes

Thousands of Satisfied Customers Worldwide saying

"Real Time Network's Key Tracer system stood out as the most reliable and robust system, with the ability for users to unlock and access only the keys that have been assigned to them, a full audit trail of every key set, and real-time alerts when keys are not returned."

"The savings in staff man hours far outweigh the cost of the electronic key cabinets and asset locker system. Not only did the system pay for itself quickly, we've gained in staff accountability, efficiency and eliminated personnel's frustrations with wait time."

"Real-time reports and alerts allow us to track the whereabouts of keys in real-time. I can set up alerts that allow me to track the issue and return of specific key sets. I can also restrict or remove access to one or more key sets remotely, which saves time."

"Reading's warehouse supervisors could check in an instant who was using which scanners live on the floor. And they could get reports emailed at the end of shifts if any scanners weren't returned listing who had used them last. It's made everything to do with our scanners so much easier."

"Since they've implemented KeyTracer Systems, Ameristar's Security personnel has saved countless hours on configuring key access controls, cleaning key tags, searching for keys and locating keys. Real-time alerts have prevented keys from going off property which would result in rekeying and possible fines from the state."

"Almost no administration required. Once setup, it takes care of itself. It's increased productivity and improved guest service as we always have access to keys. The training and commissioning [processes] were professional and flexible. Staff who had never used a key management system had no problems learning [KeyTracer]."

"Real Time Networks was our vendor of choice because of its proven ease of use from my previous experience with the system. KeyTracer provides real-time accountability for all security, emergency and vehicle keys, and gives us the ability to control access to keys for use by certain ranks and assignments."

"Setting up KeyTracer made my job easier, as I now had complete control over fleet keys. Tasks that were previously long and complicated, like tracking maintenance and servicing schedules, managing reservations, and getting notifications for unreturned keys, are now handled automatically."

"The results in just the first year were impressive. Operating efficiency improved dramatically. The company saved over 1,000 hours in staff time eliminating unnecessary wait and walk times in only a few months. Lost handhelds were eliminated. And they were able to cut 20 scanners from their equipment replacement schedule, saving the company over \$40,000 over the following four quarters."
