Senior Java Developer

Real Time Networks is a Vancouver, B.C. Canada based company experiencing rapid growth and continued success in the marketplace. Our products lead the Key Cabinet and Asset Management Security industry; we are looking for another valuable member of our Product Development Team building our core application.

We have an opening for a **Senior Java Developer**. This role has lots to offer including exposure to hi-tech security products, product development, R&D, and excellent growth potential within the company. Additionally, the position will involve rapid prototyping of new extensions or implementations of our applications; this is where the real fun is, and where you will be challenged to solve new problems and learn new skills. The qualified individual must be able to speak and write both English fluently.

What we offer
- Hybrid and/or Remote work environment
- Competitive Salary
- RRSP Matching
- Extended Health and Dental Coverage
- Professional Development Opportunities
- Social and Wellness Events

Role and Responsibilities
- Implement, maintain, and evolve cloud-based and on-premises products and services.
- Write large amounts of code, perform code reviews, write unit tests.
- Analyze and improve security for Cloud and on-premises application, provide expert guidance to Engineers on security.
- Write documentation.
- Perform extensive research and analysis to make optimal architecture and design decisions.
- Interface with other groups including Product Management, Quality Assurance/Testing and Operations
- Create quick proof-of-concept prototypes.
- Participate in scrum team.
- Continuously discover, evaluate, and implement new technologies to maximize development efficiency.

Skills / Qualifications / Requirements

- BS or MS in Computer Science, Software Engineering, or equivalent experience.
- Certified Java Professional and/or Spring Certified Professional.
- 5+ years of production level experience with Java; experience with React is considered an asset.
- 2+ years of production level experience in AWS or Azure.
- Strong experience with the Agile software development approach, CI/CD, Gradle, Maven, BitBucket or GIT, code review and code coverage tools. Experience with designing a test strategy, writing test cases, and automating testing.
- Passionate about software design and programming.
- Hands-on experience developing applications for highly scalable and highly available distributed systems.
- Strong computer science fundamentals in data structures, design patterns, algorithm design, and complexity analysis
- Good working knowledge of SQL and NoSQL databases
- Experience with software security and systems that handle sensitive data.
- Knowledge of network and web related protocols (e.g., TCP/IP, REST, HTTP, TLS).
- Interest and ability to learn new technologies or other coding languages as needed.
- Strong experience with both Windows and Linux required.
- Good communication skills, including proficiency in English, written and oral.

How to Apply

- Email a PDF copy of your resume and cover letter to lisa.egami@realtimenetworks.com
- Position will be open until filled
